PERFECT SKIN SOLUTIONS

RICH *PL TOPIC*

POLYLACTIC ACID IN HA-MATRIX

The main feature of the product is having Polylactic Acid already in a liquid form, ready to use. In order to avoid excessive polymer degradation, PLA chains are stabilized in a crosslinked Hyaluronic Acid Matrix.

STABILIZED POLYLACTIC ACID IN HA-MATRIX

The matrix of crosslinked Hyaluronic Acid protects the polymeric fractions of Polylactic Acid. In this way the PLA polymers are able to remain active for a long time without undergoing the hydrolytic process that would naturally occur over time.

- Efficacy over time
- Long lasting

THE PERFECT SOLUTION TO CORRECT SKIN IMPERFECTIONS.

Each box contains 1 vial of 10ml
