SkinFill™ B L U E  
EXOSOMETECHNOLOGY

Hyperconcentrated hyaluronic acid in 3  
molecular clusters, synthetic exosomes with  
biomimetic peptides and bioactive growth  
factors

The biostructuring product based on hyaluronic acid with the highest concentration ever created

01

### Concentration

70 mg in 2 ml

02

### 3 molecular weights

Cluster of 3 stable molecular weights

03

### Exosomal technology

Synthetic exosomes to deliver the dimeric HA cluster and peptides

04

### Biomimetic peptides and growth factors

Synthetic target molecules, specific for targeted cellular stimulation

# Protocol and technique of use

Like all biostructuring products, it is necessary to carry out a protocol of 4/6 sessions spaced 15/20 days apart.

We always suggest a maintenance session every 2 months to optimize the results obtained.
