

Ingredients

Arbutin: it's a natural molecule extracted from ursina grapes with an action similar to hydroquinone but without the extreme toxicity of the latter. It inhibits the process of melanin synthesis by blocking the enzyme responsible (tyrosinase).

Dimethylmethoxy chromanyl palmitate : a molecule of synthetic origin that easily penetrates into the skin efficiently blocking the production of melanin. It also whitens the already existent pigment reducing the intensity of the hyperchromy.

Indications

- Café-au-lait spots
- Sun spots
- Age spots
- Freckles
- Melasma / Chloasma
- Post-inflammatory hyperpigmentations

Protocol

1 treatment a week for 4/6 consecutive weeks.

The number of sessions may vary depending on the type of skin spot (intensity and depth of the spot) and on the thickness of the skin.

Best results are obtained continuing the treatment even after the complete elimination of the skin spot.

Suggestions:

Micro applications of 0.05 - 0.1 ml of product per single point until completing the treatment on all areas interested.

Massage intensely and energetically to favor the action and diffusion of the product.

Quantity recommended:

The quantity of product to use will depend exclusively on the size of the blemish.

Kit composition

The box contains 3 vials of 10 ml.

Average quantity used per session: 1.5 ml.

Number of treatments per box: 20.
